Petition	
<p>Calls on IUCN members to integrate the fight against climate change as a priority in all their programmes to prevent biodiversity loss and ensure ecosystem integrity. Requests the Director General to include the following items in the IUCN Programme 2009-2012: (a) the necessary change of energy model based on the reduction of energy consumption and production in rich countries, as the main objective of Thematic Area 2, without neglecting the need for an equitable and sustainable distribution of energy consumption for all inhabitants of the planet; (b) to modify Global Result 2. 1 which is proposed, specifying that policies and practices for climate change mitigation should be carried out in parallel with efforts against deforestation, peatland degradation and other processes of biodiversity loss; (c) give clear priority to the urgent need to act decisively in efforts to combat biodiversity loss, including by preventing deforestation and peatland destruction, as a means of combating climate change; and (d) include IUCN's support for a trade model that encourages local exchanges and consumption of locally produced goods and services, and that incorporates the environmental and social costs of long distance.</p>	
State	Fulfilment in Spain

Summary of actions carried out with effect in Spain	
<p>* The resolution is on file with IUCN and a previous report specified that it was not completed. However, since 2014 IUCN has taken several actions to fight climate change, including in Spain. Some of these are listed below:</p> <p>National Plan of Adaptation to Climate Change 2006-2020 (PNACC) Project "Comparative analysis of the needs for adaptation to climate change in Spain compared to the actions carried out by the Spanish conservation network" (2019). Declaration by the IUCN Spanish Committee on the issue of Climate Change in Spain (2019). Platform on Adaptation to Climate Change (AdapteCCa). Project "Analysis of the effect of climate change on threatened terrestrial vertebrates included in the IUCN Red List, using species distribution models" (2020).</p> <p>UPDATE 2022 Climate change: the main current threat to natural World Heritage - IUCN report. (2020). IUCN. Didactic Unit: Species threatened by climate change. (2020). Climate change is harming societies, the natural world and the services that healthy nature provides. Through its Nature 2030 Programme, IUCN will continue to monitor the impacts of climate change and guide the conservation and restoration of ecosystems to help mitigate it. (2021). Session on nature-based solutions: increasing global ambition on climate change and biodiversity. (2021). Project "Monitoring the effects of climate change on threatened vertebrates using species distribution models". (2021). IUCN Program 2021-2024. (2021). Talk about climate change. Species threatened by climate change (IUCN Red List and Climate Change in Spain). (2021). Applying the lessons learned on climate change to halt the loss of biodiversity. (2022).</p>
